Cookies

cookies, are small text files that websites generate and send to your web browser. When you visit a website, your browser stores these cookies for a predetermined period or throughout your session on the site.

User Sessions: Cookies associate website activity with a specific user. For instance, when you log in to a shopping website, a session cookie ensures you don't need to log in again for subsequent pages.

Personalization: Cookies help websites remember user actions and preferences, allowing for a customized experience. If you log out, your username can be stored in a cookie for easier login next time.

Tracking: Some cookies record your website visits and behavior.
